

U.S. Patent Application Serial No. 09/464,449  
Amendment dated October 21, 2003  
Reply to OA of July 23, 2003

**REMARKS**

Claims 1-15 are pending in this application. Claims 1-12 have been allowed. It is believed that this Amendment is fully responsive to the Office Action dated July 23, 2003.

**Claim Rejection Under 35 USC §102**

Claims 13-15 are rejected under 35 USC §102(e) as being anticipated by Kojima et al. (U.S. Patent No. 6,345,116).

Claim 13 requires that an image exposure apparatus stores position accuracy information in its internal accuracy information storage means. With this particular claimed feature, even if there is a defect in the image exposure apparatus caused by a manufacturing accuracy thereof, such a defect can be corrected by the position accuracy information stored therein so that an image formation apparatus including such an image exposure apparatus is not subjected to a positional misregistration of a transferred image which would be otherwise caused by the defective image exposure apparatus.

On the other hand, Kojima et al. relates to an image processing apparatus capable of reading gradation image data or color image data with reduced memory costs. Specifically, Kojima et al. teaches an image data reading and storing apparatus and thus fails to teach an image exposure apparatus that is used upon forming an image. In fact, there is no description at all about an image exposure apparatus in Kojima et al. Applicants note that description is given in Kojima et al. at column 14, lines 17 to 38 about reproducing read image data, but, even this portion does not refer to the image exposure apparatus.

Therefore, withdrawal of the rejection of Claims 13-15 under 35 USC §102(e) as being anticipated by Kojima et al. (U.S. Patent No. 6,345,116) is respectfully requested.
